Installation Tips

- Post spacing should be no more than 14' apart (12' - 14' is ideal).
- Posts must be located at all points where the ground slope is more than gradual. A good rule of thumb for deciding this is: The top of the fence line must always run parallel to the ground. Additional posts are available for purchase if needed.
- When attaching the fence to the posts, use more Ties at the begining, end and corners of your enclosure.
